Hi Sean and Davis,

We finished the day with our fourth sediment core (SC-S092), which is located at river mile 5.8. The water at the marked location was too shallow (4.2 ft) and we had to move further offshore (approximately 92 ft away). Two soil cores were attempted, and the second attempt achieved an 82 percent recovery. Please see the attached photos for details.

Photo 1: Sediment coring on SC-S092 (Attempt 1).

Photo 2: Pulling of core barrel (Attempt 2).

Please let me know if you have any questions.

Sincerely,

Joe Guggenberger, PhD, PE

Environmental Engineer

CDM Smith
